

VACANCY STEELCONSTRUCTION MECHANIC AND/OR TRAINEE

Come and join assembly team.

We are looking for steelconstruction mechanics and/or trainees.

Job description:

As a mechanic and/or trainee you work together with your colleagues on site to assemble all kinds of steelworks projects as well as (turnkey) building projects.

Most of the time this will be in the area, sometimes a bit further, but – if you want to – it can also be abroad. Our Assembly Manager is your direct executive.

Which qualifications do we look for:

- You have experience in assembly of steel constructions plus roof and façade cladding
- You can read designs and plans, and put construction/roof/cladding parts in place with hoisting and lifting equipment
- You are not afraid of heights: you hold a man lift certificate or want to go on a training for this
- You have basic SCC (safety certificate constructors) or want to on a training for this
- You have a B +E driver's license or want to go on a training for this
- You have a good eye for details and quality
- Working independently is not a problem for you, neither is working in a team
- And you are flexible

If you don't have the desired experience or training yet, but assembly works really looks appealing to you? Don't worry, just apply as a trainee. We are certified to train and educate you, learning-on-the-job.

Our commitment to you:

Our company goal is a qualitative, long-term and durable working environment

- A market based salary with good secondary terms and conditions of employment
- An education in the field of welding, safety, working at height or getting your driver's license
- Friday-afternoon-fun with colleagues
- In company work-out with colleagues at the end of a working day
